

Lab Midterm Practical Breakdown: 70 questions = 140 points

Lab 1 (**anatomic terminology**) = approximately 8 questions

Lab 2 (**tissues, integument**) = approximately 12 questions (ID, locations, functions, features)

Labs 3 and 4 (**bones**) = approximately 26 questions (bones, features, sides)

Labs 5 and 6 (**muscles**) = approximately 24 questions (ID muscles, attachments, actions)

2325 Practical Policies

1. Spelling/wording of answers:

- a. One letter incorrect (but doesn't change the word) - full credit
- b. 2-3 letters incorrect - ½ credit
- c. More letters incorrect - no credit
- d. Multi-word answers, each word is partial credit. Example:
 - i. Correct answer = conoid tubercle (of the clavicle)
 - ii. Conoid tuberosity (of the clavicle)- ½ credit
 - iii. Lesser tubercle (of the clavicle) - ½ credit

2. Attachments: Students must be able to identify 1 proximal attachment/origin or 1 distal attachment/insertion on a question. No credit if an origin is asked and an insertion is answered, or vice versa.

3. Parenting: Parenting is required on all bones, unless instructor's judgment dictates the name of the bone is implied in the name of the structure. This is at the instructor's discretion.

4. Actions: Students must name **1 action with the joint / bone** for full credit.

Example - muscle: biceps brachii, short head

- a. Flexes forearm at elbow joint - full credit
- b. Flexes forearm at wrist joint - ½ credit

5. Abbreviations: only right/left may be abbreviated (and artery/vein/nerve on final).

6. Touching during practicals. For the midterm, students may touch. Instructors will guide their own students on their touching expectations.

7. Bonus points: Instructors will allow 10 earned bonus points per semester, in any format the instructor chooses.
